

Are you controlling network change-or is it controlling you?

NetMRI-Automating and Controlling Change and Network Configuration

Instead of relying on manual processes or cumbersome scripts, the NetMRI network automation and configuration management software helps users automate and control change and network configuration management for multi-vendor layer 2 and 3 network devices. Embedded intelligence and best practices ensure device configurations are set correctly and alert users automatically or suboptimal settings. For compliance and standardization initiatives, the built-in rules (including PCI, ISO, DISA, NSA and IAVA standards) quickly verify policies are followed or generate alerts for any violation.

Key NetMRI Features

- Audit changes automatically and analyzes network configurations
- Visualizes the complex relationship between devices
- Scales to handle the most diverse and complex networks
- Provides the fastest time to value with installation in less than 30 minutes and actionable data within hours with no customization required
- Detects and controls change from a single system, enabling continuous improvement while reducing the risk unauthorized or misconfigurations
