ForeScout Expands Presence in Malaysia with Secure Source

ForeScout is a leading supplier of network security and policy compliance management solutions.

ForeScout self-contained network access control (NAC) appliance is easy to deploy because it required no software, no agents, no hardware upgrades or reconfigurations.

Within ours, ForeScout customers can see and control everything in their network - all devices, all operating systems, all applications, all users.

Over 500 of the world's most secure enterprises and military installations rely on ForeScout to protect their networks, enforce endpoint security policies and protect sensitive data.

IN THE NEWS

ForeScout Technologies Recognized as a Leader in the 2011 Magic Quadrant for Network Access Control

Gartner. According to Gartner's Magic Quadrant for Network Access Control, leaders are successful in selling large NAC implementations (10,000 nodes and greater) to multiple large enterprises. Leaders are pure-play NAC vendors or networking and/or security companies that have been first to market with enhanced capabilities as the market matures. Leaders have the resources to maintain their commitment to NAC, have strong channel strength and have financial resources. They have also demonstrated a strong understanding of the future direction of NAC, including the impact of BYOD and guest networking. Leaders should not equate to a default choice for every buyer, and clients should not assume that they must buy only from vendors in the Leaders quadrant.

BT Diamond IP Releases IPControl Version 5.0

BT Diamond IP, a leading provider of software and appliance products and services that help customers effectively manage complex IP networks, announced today the availability of IPControl software version 5.0, the newest version of BT Diamond IP's market-leading IP address management (IPAM) software.

Defining Next-Generation Network Intrusion Prevention

Gartner believes that changing threat conditions and changing business and IT processes will drive network security managers to increasingly look for next-generation network IPS capabilities at the next firewall or IPS refresh cycle.

New Sourcefire firewall with content filtering promises more control

Network security vendor Sourcefire has combined the functions of intrusion prevention systems (IPS) and firewalls into a new series of products in an effort to give system administrators better insight and control over enterprise network activity

WAN Optimization: Network vs. Application Layer Optimization

The application layer of the Open System Interconnection (OSI) stack has long been regarded as a focal point for wide area network (WAN) optimization. Efforts to optimize application delivery were centered here because the pain was rooted in optimizing only a handful of specific applications at branch or remote offices.

Huge Security Breach at Security Firm Symantec No Threat to Consumers, Analyst Says

Imperva help explains how Symantec's source code could have been breached.

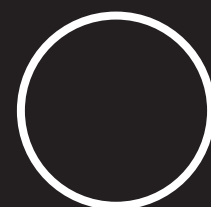

NetScout Integrates Virtual Probe Technology into Cisco Unified Computing System Express Platform

NetScout® Systems, Inc. today announced the nGenius® Integrated Agent for the Cisco® Unified Computing System™ Express (UCS Express) platform.
