Secure Source Wish You A Happy and Prosperous Chinese New Year 2014

Cyber criminals adopting cloud database services as new malware platform

There is a new malware platform for cybercriminals: Database as a Service (DBaaS). A new report released by Imperva, Inc. concludes that by bringing data one step closer to hackers, DBaaS makes it possible for hackers to compromise an organization's database without accessing its network – ultimately increasing the risk of a data breach.

ForeScout
Named to SC
Magazine's
Prestigious
Industry
Innovator List
For Second
Consecutive
Year

ForeScout Technologies, Inc., a leading provider of pervasive network security solutions for Global 2000 enterprises and government organizations, has been recognized by SC Magazine as an Industry Innovator in Access Control, in particular, for bi-directional integration advantages delivered through ForeScout ControlFabric™ technology. This marks the second consecutive year ForeScout has been honored with this prestigious distinction. Last year, the company was lauded for its progressive BYOD security offering.

Despite the Escalation in Frequency and Complexity of DDoS Attacks, Survey Reveals Businesses Remain Ill Prepared to Protect Themselves

New research from Corero Network Security (CNS: LN) reveals that many businesses are failing to take adequate measures to protect themselves against the threat of a DDoS attack. A survey of 100 companies revealed that in spite of the reports about the cost of downtime and the potential for DDoS attacks to mask greater threats, businesses are failing to put in place effective defenses or plans to mitigate the impact of a DDoS attack against their organization.

Using firewall rules to migrate business applications to a private cloud

An increasing number of organizations are already taking advantage or planning to take advantage of the many financial and operational benefits that a private cloud has to offer. However, in order to achieve these benefits, IT must take on complex projects to migrate business applications and/or data centers from the physical to the virtual realm.

IN THE NEWS

2 Predictions for the cloud in 2014

In the few years since its adoption rates skyrocketed, cloud computing has proven itself to be a fascinating technological phenomenon to watch. As it's changed the way companies do business, the technology itself has developed, and despite initial concerns about data protection in the cloud, the effectiveness of cloud security is now virtually past debate. So, what kinds of developments might next year hold for this far-reaching, game-changing technology?
