

# Thought-leadership Executive Luncheon Series

## The Rise of the SD-WAN Revolution

### The Rise of SD-WAN: Broadband Your WAN with Enterprise-Grade Connectivity and Performance

The cost and complexity of the Enterprise WAN continues to soar as mission-critical applications move to the cloud; requiring an unnecessary and dramatic increase in MPLS services. How can you balance the requirement for secure and reliable connectivity with the desire to simplify branch connectivity, improve application performance and lower network costs?

Join Secure Source and Silver Peak at this exclusive luncheon to learn how innovative companies like [Kingston Technology](#) and [Interroll](#) took SD-WAN from initial concept to production deployments to:

- Reduce the dependency, complexity and cost of MPLS networking by up to 90%
- Bringing idle MPLS or Internet links to life for more efficient connectivity
- Harness an Internet WAN overlay to improve application and SaaS performance
- Connect branch offices quickly in days- not weeks

We look forward to hosting you to an afternoon of gastronomic delight and SD-WAN discussions.

*“By the end of 2019, 30% of enterprises will use SD-WAN products in all their branches, up from less than 1% today.”*

*-Gartner SD-WAN Market Guide, December 2015*

**23rd November 2016**  
(Wednesday)

**10 a.m. to 2:30 p.m.**

**Le Meridien**  
**Kuala Lumpur**

*Seats are limited so early **RSVP** is highly recommended.*
